Piece by Piece

SENIOR PROGRAMMER

Gamkat / No More Robots · PC and Steam Deck (2026) · Nintendo Switch in development

- Joined while the game was PC-only. Built the cross-platform input system with key rebinding, and the console and controller UI/UX with full controller navigation.
- Implemented localisation with automatic button glyph switching by platform and controller type.
- Built gameplay systems: customisation feature and UI, trading system and the NPC AI state machine. Owned the wandering outdoor NPCs and non-customer NPCs.
- Switch port: took a build that would not boot to a 60 fps minimum by fixing a memory leak and painting crashes, tuning texture, resolution and quality settings, and optimising materials and real-time texture painting.
- Helped finish and ship the Steam release while developing the console version in parallel.

Democracy 4: Console Edition

PROGRAMMER

Positech / Auroch Digital · Switch, PS4, PS5, Xbox One, Xbox Series X|S (2024)

- Worked on the port from start to release. Part of the team that translated the original C++ PC game's backend to C#.
- Implemented the fully redesigned console UI: views and menus, navigation and view flow with Doozy UI, transition animations and a responsive layout for all screen resolutions.
- Built cross-platform input with button glyphs that change automatically by platform and controller type.
- Optimised a UI-heavy game for Switch and Xbox with UI, texture and asset-loading techniques to remove lag, tearing and crashes.
